

# Application and Resource Access Management Via Jira

Streamline and automate access requests across your organization

Managing access across multiple applications can be complex, but Access & Governance Automation Workflow for Jira makes it effortless. With this advanced plugin, users can request access to applications like Okta, Azure AD, AWS, Google Workspace, Jira, Confluence, GitHub, and more—all from within Jira Service Management (JSM).

## Our Solution Offers:

- ✓ **Automated Access Requests:** Allow users to request access directly by submitting a Jira Service Management ticket, eliminating manual workflows and reducing delays.
- ✓ **Approval Workflow:** Ensure organizational compliance with automated notifications to approvers, who can review and approve access requests based on company policies.
- ✓ **Seamless Provisioning:** Once approved, access is automatically provisioned for the requested application, speeding up onboarding and reducing the risk of human error.

## Key Benefits:

- ✓ **Efficiency:** Automate access requests, approvals, and provisioning to streamline your organization's workflows.
- ✓ **Security & Compliance:** Ensure all access requests comply with organizational policies, reducing the risk of unauthorized access.
- ✓ **Scalability:** Support multiple applications with automated governance workflows, ensuring easy scalability as your organization grows.
